Press Release - November 2007

BIOMIC® V3 Automates the Quality Control of ID Panels

The BIOMIC® V3 Microbiology System now instantly reads and interprets the Quality Control of species identification (ID) test panels based on proposed CLSI M50-P guidelines. This provides an efficient and standardized means to record ID QC results. Color digital images of QC panels are instantly displayed and interpreted on-screen. BIOMIC V3 automates all varieties of RapID (Remel), API (bioMerieux), BBL Crystal (BD) panels.

BIOMIC V3 also automates antibiotic disk (AST) QC testing based on CLSI M2 and M100 guidelines. A range of ID and AST QC summary reports following CLSI and CAP requirements facilitate laboratory inspections.

BIOMIC V3 serves as a primary or complimentary AST-ID system for microbiology laboratories of all sizes and setups. Since 1984, Giles Scientific has successfully placed its microbiology systems in 50+ countries.

About Giles Scientific, Inc

Giles Scientific has served clinical, pharmaceutical and veterinary microbiology laboratories since 1984. The Company develops, manufactures, sells and supports our customers with our color digital imaging equipment in 50+ countries.
